Finding cyber-risk coverage in your traditional policy

By Peter S. Selvin

Although much attention is now focused on the new insurance products which are specifically designed to cover cyber-risks, companies whose property or business operations are impaired by reason of such events also ought to consult their traditional insurance policies. Such policies may often provide unforeseen benefits.

Theft of customer information by computer hackers. A company which is victimized by computer hackers may face a variety of losses and legal risks. For example, in a recent case where private customer and credit card information were stolen, the company incurred substantial financial losses, including nearly $4 million in remediation-related expenses, such as costs associated with chargebacks, card reissuance, account monitoring and fines imposed by the credit card companies. Retail Ventures, Inc., et al. v. National Union Fire Insurance Company of Pittsburgh, Pa., 691 F.3d 821 (6th Cir. 2012).

In that case the company successfully obtained reimbursement of these expenses through a “Blanket Crime Policy,” which included an endorsement for “Computer & Funds Transfer Fraud Coverage.” The carrier denied coverage contending that the crime policy was effectively a “fidelity bond,” a form of insurance which provides only first-party coverage. The 6th U.S. Circuit Court of Appeals rejected that characterization and found that the insurer was responsible for reimbursing the company for its losses in connection with the theft of customer information.

Companies victimized by computer hackers may face liability from customers whose personal information has been compromised as well as from financial institutions (which may be obligated to replace their customers’ cards and reimburse them for fraudulent transactions). Two recent cases address this scenario. See Anderson, et al. v. Hartwell & Brothers Co., 659 F.3d 151 (1st Cir. 2011) (class action by store customers); In re Heartland Payment Systems, Inc. Customer Data Security Breach Litigation, 534 F.Supp.2d 566 (S.D. Tex. 2011) (credit card issuer banks and credit cardholders).

Although neither case addressed the insurance coverage for the underlying losses, there are at least two potential sources of coverage.

First, the personal injury coverage which its carrier denied. The court held that coverage under traditional first-party policies for the loss of customer and credit card information was available.

Although much attention is now focused on the new insurance products which are specifically designed to cover cyber-risks, companies whose property or business operations are impaired by reason of such events also ought to consult their traditional insurance policies.

Second, a D & O policy might provide coverage for suits against a company arising from a data breach where the policy provides entity coverage. Thus, “where entity coverage under a D&O policy is broad, it may encompass liability for privacy breaches and cyber-risks.” “Proskauer on Privacy,” Section 17.2.3 at p. 17-15.

In addition to customers and financial institutions, another source of legal risk might be claims by a company’s shareholders against the company’s directors and officers for failing to accurately disclose its cybersecurity risks. In this regard, the SEC issued a written guidance on this subject in October 2011. See http://www.sec.gov/divisions/corpfin/guidance/cfguidance-topic2.htm. The emerging obligation on the part of a company’s directors and officers to include in its securities filings an assessment of a company’s cybersecurity risk means that SEC enforcement actions and shareholder suits based on alleged inadequate disclosure in this area will inevitably follow.

In the event that company officers or directors are sued in connection with data breaches, the primary vehicle for handling such suits would be conventional D & O policies: “this type of insurance may be applicable in limited circumstances where an officer or director is sued directly in connection with a privacy breach — perhaps for lack of due care or personal involvement in dissemination of confidential information.” “Proskauer on Privacy,” op. cit., Section 17.2.3[A] at p. 17-15.

A computer virus disables a company’s operations or results in the loss of data. The majority position is that electronically stored data does not constitute “property” for purposes of property or business interruption coverage. See, e.g., Ward General Insurance Services, Inc. v. Employers Fire Insurance Co., 114 Cal. App. 4th 548 (2003). Nevertheless, there are some cases which have found coverage for business interruption or data loss caused by a computer virus.

The key issue is often whether the loss of such data constitutes “direct physical loss or damage to property” within the meaning of traditional property or business interruption policies.

The courts have split on this issue, a minority finding that the destruction or impairment of electronic data is sufficient to constitute “direct physical loss of or damage to property.” This split means that coverage under traditional first-party policies for the loss of computer data may depend on the jurisdiction involved and the particular policy form that is used.

The following are examples of instances where coverage was found:

A company was insured under a property damage policy which insured against certain business and service interruption losses. As a result of a power outage, the company’s computer systems were rendered inoperable. The company made a claim under its policy, which its carrier denied. The court held for the policyholder, holding that “physical damage” is not restricted to the physical destruction or harm of computer circuitry but also includes loss of access, loss of use and loss of functionality. See American Guaranty and Liability Insurance Co. v. Ingram Micro, 2000 WL 726789 (D. Ariz. 2000).

The operator of a medical clinic was insured under an “All Risks” property insurance policy which included business interruption coverage. As a result of a hurricane and consequent electrical and telephone outages, the clinic’s computer system became corrupted, resulting in a loss of data. Although the carrier denied the operator’s claim, the court granted summary judgment to the operator, holding that the corruption of the policyholder’s computer constituted a “direct physical loss of or damage to property” within the meaning of the policy. See Southeast Mental Health Center, Inc. v. Pacific Insurance Company, Ltd., 439 F.Supp 831 (W.D. Tenn. 2006).

An employment agency had a business insurance policy which, in addition to traditional coverages, also provided that the carrier would reimburse the agency for lost information stored “on electronic or magnetic data.” The agency’s computer system malfunctioned as a result of a “hacker” having injected a virus into the system. The carrier denied the claim, but the court held for the policyholder, finding that the personal property losses sustained by the policyholder were “physical” as a matter of law. See Lambrecht and Associates v. State Farm Lloyd’s, 119 S.W.3d 16 (Tex. App. 2003).

Claims for misappropriation of another’s computer data. This scenario arises when a company hires an employee who was formerly with a competitor. The new employee brings computer files from a competitor which are then downloaded to a new employer’s system. The competitor then brings a claim for IP theft and trade secret infringement and thereafter learns through discovery that some of its data resides on the new employer’s computer network.

Although some cases outside of California take a different view, the majority position is that claims for trade secret misappropriation or IP theft will not be covered under a traditional CGL policy. See S.B.C.C., Inc. v. St. Paul Fire & Marine Insurance Co., 186 Cal. App. 4th 383 (2010).

However, the outcome may be different under a D & O policy. See Acacia Research Corp. v. National Union Fire Insurance Co. of Pittsburgh, Pa., 2008 WL 4179206 (C.D. Cal. Feb. 8, 2008), where the court concluded that the scope of the insuring clause providing for coverage for “wrongful acts” was broad enough to require the D & O carrier to reimburse the company and its officer for defense fees and the settlement paid in an IP theft/trade secrets case. Similarly, in MedAssets, Inc. v. Federal Insurance Co., 705 F.Supp.2d 1368 (N.D. Ga. 2010), the court concluded that a claim alleging misappropriation of confidential information against insured company was covered under the company’s D & O policy.
